

# Environmental permitting of the Tzaneio General Hospital of Piraeus

*Client: Tzaneio  
General Hospital of  
Piraeus*

*Service employed:*

*EIA experts*

*Duration:*

*2012*

Tzaneio General Hospital of Piraeus (<http://www.tzaneio.gr>) is one of the most significant hospitals in Athens and Greece. It is in operation since 1873 and has almost 450 beds. The aim of this assignment was the environmental permitting of the hospital operation.

During this assignment we were hired as EIA experts to support the Technical Department of the Hospital to prepare the EIA accordingly both for the renovation and the operation of the Hospital. Therefore, a methodology was constructed comprising: a) desktop study during which all available data were reviewed (e.g., waste management, energy consumption, water consumption), d) site visits during which the main environmental related areas were visited (e.g., healthcare waste management area, waste recycling area), and the key personnel were interviewed, c) description of the mostly urban environment, d) identification of the main environmental and social impacts, d) determination of the mitigation measures.
